ALIEN INTELLIGENCE: AN INTRODUCTION TO AI FOR ARCHITECTS

L'architettura nell'era dell'intelligenza artificiale

Guest_Neil Leach
Curated by_Christiano Lepratti

Everyone is talking about AI these days. But what exactly is AI? How did it evolve? And what potential does it have to influence the future? This lecture takes you on a roller coaster ride looking at the extraordinary - but often somewhat terrifying - potential of what is arguably the most significant invention of humankind. The lecture concludes that we are about to face a radically different form of intelligence - an 'alien intelligence' - that will far exceed human intelligence, and completely transform the discipline of architecture.

Neil Leach is an architect and theorist. He teaches at Florida International University in the United States and has taught at many other prestigious schools of architecture, including the Architectural Association in the United Kingdom and the Graduate School of Design at Harvard University in the United States. He is a member of the European Academy and has been a NASA Innovative Advanced Concepts Fellow. He has published over 50 books on architecture and digital design, translated into six languages. He is also the English translator of *De re aedificatoria* by Leon Battista Alberti, from the original Latin.
